

Reset xfce4 desktop

Sometimes for some reason you need to clear all the settings for xfce for a user and reset to default.

In the terminal, as root run the following command:

rm -rf /home/user .cache and **rm -rf /home/user .config**
(user is name of user for whom you are resetting xfce)

Reboot and select default after first login as user or just logout and log back in as user.

Add xfce launcher / quickstart, on panel

Right click on panel > add new items > launcher.

You will now have a properties window.

Open applications menu > Accessories > appfinder, then drag your app of choice to the properties windows of the launcher.
