

One of these vital services needed for home network connections might be disabled or not working properly:

1. DNS Client
2. Function Discovery Provider Host
3. Function Discovery Resource Publication
4. Peer Networking Grouping
5. HomeGroup Provider
6. HomeGroup Listener
7. SSDP Discovery
8. UPnP Device Host

Here's what you can do to make sure they're all enabled:

1. Click **Start**.
2. Type **services.msc** and press **Enter**.
3. Double-click the service, choose **Automatic** as the **Startup type**, and click **Apply**. Do this for all the listed services above.
4. Right-click the service, then choose **Restart**. Do this for all the services listed above as well.
5. Leave the homegroup, then rejoin it.
6. Restart all the computers in the homegroup.
